► Product crusher

Primary crusher:

Large fragments are crushed with the primary crusher into fist-sized lumps.

Lump crusher:

Larger lumps are reduced with the lump crusher, such as for a screen mill, to a size that can be processed.

GMP-compliant crusher with lump breaker

Foodstuff, chemical and pharmaceutical industries, as well as other industries, are faced with the problem of dealing with lumps and agglomerates.

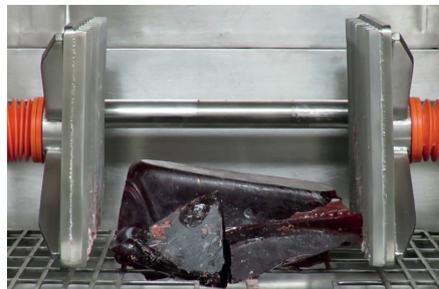

This very robust breaker crushes and homogenizes medium-solid, clumped and caking bulk solids.

The pre-crusher breaks these down to fist-sized clumps.

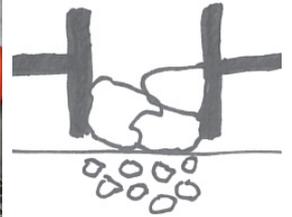

A downstream lump crusher breaks these down to a workable size which can then be processed, for example, with a screen mill.

optional primary drum crusher

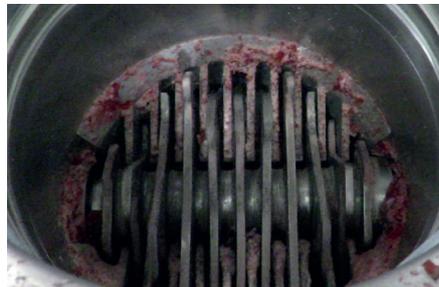

Primary crusher

AREAS OF APPLICATION FOR LUMP BREAKERS

- Pre-breaking for subsequent fine milling
- Bag emptying / BIG-BAG emptying of clumped or agglomerated products
- Process optimization
- The lump breaker fits directly into the product stream.

Clump crusher

optional subsequent screen mill
